Using AI Well at the Point of Delivery

PRINTABLES PACK

Cohort 5 · Frontline

The cards workers carry away, the drill cards, and what to set out before the session. Print the job-aid card on stiff paper, one per worker.

PRINT CHECKLIST

1 × Spot / Override / Flag card (stiff paper, per worker — the one they keep)
1 × Five red flags card (per worker)
1 × Override note + escalation card (per worker)
1 × Consent + explain scripts card (per worker)
1 × Thirty-second check card (per worker)
1 set × Spot-the-error drill cards (per table)
1 × Sector card for the room's sector (per worker)
1 × Facilitator pre-arrival checklist (you only)
1 × Feedback form + certificate + table tent (per worker)

Facilitator pre-arrival checklist

Trainer only. This course works only when localised.

Localise first

- Replace every generic example with the room's ACTUAL tool, clients, and day.
- Confirm the three OPEN rights facts for this institution before teaching the rights module.
- Translate delivery into the room's language; the cards are prompts, not a script.

Room & print

- Tables of 4–6; space to practise out loud.
- Print the Spot/Override/Flag card on stiff paper, one per worker.
- Place the drill cards face-down per table; release at the drill.
- Have the sector card for this room's sector ready.

Spot → Override → Flag

The whole course on one card. Keep it where you can see it.

SPOT

Does the answer fit the person in front of me?

OVERRIDE

If not, follow the person, not the screen — and write one line why.

FLAG

Tell the right person, the right way, at the right time.

The computer can be confidently wrong. Your judgement is part of the system.

My escalation contact:

The five red flags

Any one means: stop and look again.

#	Red flag	What it looks like
1	It contradicts your eyes	The answer disagrees with what you plainly see.
2	The same odd answer repeats	Same strange result, same kind of person.
3	It does not fit this person	The result misses their obvious situation.
4	It changed for no reason	The same case gave a different answer than before.
5	It is too sure	A hard yes/no on something you know is complicated.

Override note + escalation card

The override note

Write one line: “Tool said ___. I did ___ instead, because ___. Date, my name.”

Practise one now:

My escalation card

Who (named person / desk for this tool):

How (the channel I will actually use):

Backup if they don't answer:

Now or later: tell them NOW if someone may be harmed; LOG it if it is a pattern.

Consent + explain scripts

Honest consent

“I am collecting ___ to ___. It will be used by ___ and not for ___. You can say no, and if you do, ___.”

Ask them to explain back what they agreed to. If they can't, it wasn't real consent.

Explaining the tool

“A tool helps me by suggesting ___. A person — me — still makes the decision. If you disagree, here is how to ask for a review.”

Never say 'the computer decided' or 'it is always right.'

The thirty-second check

Run this before you accept any tool answer that affects a person.

1. Does it fit? the person in front of me, what I can see and know.

2. Have I seen this before? the same odd answer for the same kind of person.

3. Am I sure, or just rushed? if rushed, slow down one step.

Drill cards — spot the error

Cut into cards. One scenario per card; the room calls the red flag.

Card 1. A score of 82 for a client you know is borderline. What does the clean number hide?

Card 2. A 'no' for a person holding a valid document. Which flag?

Card 3. The third woman this week flagged for the same reason. Which flag — and escalate now or log?

Card 4. The same case you entered last week gives a different answer today. Which flag?

Card 5. A confident 'high risk' on a household you visited yesterday and saw was stable. Which flag, and what do you do?

Sector card · Health (ASHA / ANM)

Your tool usually ranks who to visit or flags who is high-risk.

Spot. The ranking disagrees with your last visit, or the same household type always ranks low.

Override + flag. Visit by your own judgement of need; record 'Tool ranked ___ low; I found clear need.'

My tool's name + my escalation contact:

Sector card · Agriculture extension

Your tool usually advises sow date, input, price, or forecast.

Spot. The advice ignores the real soil, water, or this year's season.

Override + flag. Adapt to the real plot; report advice wrong for the area or season.

My tool's name + my escalation contact:

Sector card · Benefits / social protection

Your tool usually decides yes/no on support or flags accounts.

Spot. A denial against the documents, or the same group always flagged. A wrong 'no' can leave a family without food.

Override + flag. Process the eligible family as eligible now; escalate a repeating pattern fast.

My tool's name + my escalation contact:

Sector card · Education

Your tool usually flags students 'at risk' or who needs help.

Spot. A flag that doesn't match the child you know, or always the same kind of student.

Override + flag. Act on what you know of the child; report a wrong or stale flag.

My tool's name + my escalation contact:

Sector card · Banking correspondent

Your tool usually blocks transactions, flags fraud, scores credit.

Spot. A block or low score for a regular client you know is legitimate.

Override + flag. Use the manual-review route; never just turn them away; report the wrongful block.

My tool's name + my escalation contact:

Feedback & evaluation

One per worker, anonymous, collected at close.

	Yes	Somewhat	No
I now know how to spot when my tool is wrong			
I know I am allowed to override, and how to record it			
I can name my escalation contact			
The examples matched my real work			

One thing I will do differently tomorrow:

One thing that would make this course better:

Certificate of completion

APLYD

Using AI Well at the Point of Delivery

This certifies that

---

has completed the APLYD Cohort 5 · Frontline programme — able to spot when an AI tool is wrong, override safely, and flag it.

Trainer: _____ Date: _____

Table tent (name card)

Print, fold along the centre, stand on the table.

[NAME]
